

BioFlora® Compost

Creating a Partnership
between
Crops & Soil

BioFlora® Compost is a high quality compost formulated with seaweed and fish solubles. There are many factors that go into the analysis of high quality compost and planting mixes. Some of these considerations include compost maturity, microbial diversity, nutrient analysis, pH, heavy metal content, pathogen inhibition characteristics, absence of weeds and diseases and the actual composition of the compost. BioFlora® Compost with fish solubles and seaweed has been developed to meet the highest standards in the industry and yet still be competitive with less expensive artificial composts generally made from mixture of sewage sludge and sawdust or green waste.

BioFlora® Compost is screened to 3/16" and can be used as a soil amendment, mulch and is **ideal for potting soil!**

BioFlora® Compost does not contain microorganisms.

100% safe for Children and Pets!

the BEST ORGANIC FERTILIZER!

WHY NOT GO GREEN? GO BIOFLORA®!
